AKOMAC as the Manufacturer of Sheet Metal Working Machinery, has been a leading provider for the automotive and metal Industry. AKOMAC offers a wide range of products designed to meet all demands. Since 2000, AKOMAC has been committed to serving for customers satisfaction and continuous development.

Quality oriented production and good Customer support have always been the basic rule of the company. Machines are designed to be reliable, durable and precise.

The AKOMAC brand have proven it's futuristic vision by it's development as a manufacturer. The headquarters of the company are fortunate idealist and dynamic. The experienced foreign trade intelligence grants more confidence to the customers.

We determine our mission with the sentence "We giving shape to the Sheet ". We perfectly understand the expectations and requirements of users from our product and provide them to get more performance from the machine. This policy shows our high knowledge and importance we serve to customers' satisfaction.

WHO DO WE WORK WITH

The AKOMAC exports high quality machines to many countries with On 5 continents and with 32 AKOMAC seller;

- In Europe side :** Germany, Denmark, France, Spain, Greece, Romania, Portugal, Poland, Hungary, Bosnia and Herzegovina, Lithuania, England, Serbia, Italy, Russia and Ukraine
- In Middle East side :** Syria, Jordan, Saudi Arabia, Iraq, UAE, Madagascar, Lebanon, Kuwait, Qatar and Iran
- In North America Side:** United States, Canada, Mexico, Colombia
- In South America Side :** Brazil, Uruguay, Chile, Paraguay
- Far East Side :** Vietnam, Singapore, Malaysia, China, South Korea
- In North Africa:** Egypt, Libya, Algeria, Ethiopia, Sudan, Tunisia
- Australia**

As in the past, the future of us contains more opportunities and developments for you to consider the special advantages we offer: High quality with competitive prices. Equipment attached are world known brands like Bosch, Rexroth, Horbiger, Cybelec, Delem, Elgo, Telemecanique, Siemens, Heidenhein, Givi Misure Wila , Wilson , Unimec, Roller, Esa Kvara.

As a sign of the success in manufacturing, our back-up service is ready to work for stabilization in your business. We offer you the best technical support.

STANDARD EQUIPMENT AND FEATURES

- Y1,Y2,X 3 Axes CNC
- Cybelelec Touch8 Touch Screen Colour Control Unit
- Akomac X Axis Back Gauge with AC Motor, Including 2 pcs Finger Blocks
- Support arm with scale & T-Slot & Tilting stop. 2 pcs
- Hilalsan European Type Top Tool Clamping
- European Type Top Tool H:66,6mm 85° R:08mm
- European Type Bottom Tool 4V H:60x60mm
- Back safety Light Curtains
- Lighting Lamp
- Foot Pedal with Emergency Stop Button

OPTIONAL EQUIPMENT

- Manual Crowning
- CNC Controller Motorized Crowning
- Akomac X,R Axes Back Gauge with AC Motor
- Akomac Heavy Duty X,R,Z1,Z2 Axes Back Gauge with Mitsubishi Servo Motor
- Akomac Heavy Duty X,R,Z1,Z2,X5,X6 Axes Back Gauge with Mitsubishi Servo Motor
- Akomac ATF Type X1,X2,R1,R2,Z1,Z2 Axes Back Gauge with Mitsubishi Servo Motor
- Sliding Rear Door
- Custom Full-length casing
- Stand Type Foot Pedal with Emergency Stop Button (Fiessler Brand)
- Sheet Follower . Mitsubishi Servo Motor
- Oil Heater
- Oil Coolant with Fan
- Roller European Type Hydraulic Top Tool Clamping ,
- Roller European Type Hydraulic Bottom Tool Clamping ,
- Wila Type Hydraulic Top Tool Clamping ,
- Wila Type Hydraulic Bottom Tool Clamping ,
- Central Lubrication Manual
- Central lubrication Motorized
- CE with Manual Fiessler AKAS II M-FMSC (Safety Plc)

GENERAL FEATURES

- The machine frame manufactured with the advanced technology with exact tolerances and stress relieved with significant welded components.

All tensile points designed with large radii and strain accumulation and possible welding cracks eliminated.

- The lower and upper tables' inertias designed for optimum value for minimum deformation.

- The top plate intended to positioned vertically so that the roller bearings, piston bearings, and felts can compensate for vertical loads.

- The hydraulic cylinder is designed as double-sided and honed to surface quality of 2 microns. Thus, minimum wear resistance is created for the felts. The cylinder bodies manufactured as SAE 1040 material forged.

- The hydraulic cylinders are bolted to the front of the feet with bolts and cams to provide excellent leveling and load balancing.

- Piston head features: Omega-type felts fitted with full bronze bearings, semi-angled sleeves.

- The pistons are precision ground and hard chrome plated to provide low friction and abrasion resistance when the piston passes through the felts.

- The adjustable top tray slides made from materials that are suitable for little friction resistance. These beds arranged for guiding to move the top table from right to left and front to rear.

- The Akomac hydraulic system allows precise usage at all pressure values up to the maximum operating pressure. At the same time, with these pressure values, precise cylinder positioning, synchronization, and repeatability are achieved.

- Backgauge system manufactured following environmental conditions. Backgauge bearings made for heavy conditions with double bearers. Scrapping type bearings used against dust and other particles that will accumulate in the linear guideways against dusty environmental conditions.

- The outer surface of the machine is painted with two layers of paint at least 60 microns in thickness to protect against weather conditions. Paint drying is done gradually in a different time and temperature ranges in state-of-the-art ovens.

- Standard Y1, Y2, X-axis.

The most important factor for precision bending in press brakes is the Backgauge system.

Akomac design features a special, powerful and precise backgauge system that works on linear bearing ways at side counters and large-sized ball screws.

The special design has very strong construction due to its strong mechanical structure and can withstand large loads.

The backgauge finger blocks move on top of the single-rail and steel-plated top profile. These backgauge finger blocks are very sensitive and can be adjusted from any point.

Backgauge Finger

X BACKGAUGE

H: Belt tensioning mechanisms used to prevent the trigger belts, which engage the X axis motor, from making a gap.

C: The X Axis console is manufactured with impact-resistant system.

D: AC motor used in the back gauge

F: Resistant to wear and deformation, precisely adjustable, and heat treated backgauge finger blocks.

F: Mechanical braking system to prevent movement of fingers due to shocks and vibrations during operation.

G: Thanks to the tapered bearing made of tapered roller at the ends of the ballscrews, the cavities which could be formed in the ballscrew position are removed.

A: Parallelism problems that may arise either during manufacturing process or due to impacts over time can be adjusted very precisely.

A: Movable top profile designed to absorb deformations that may occur in the trapezoid and precisely calibrate the distance to the bottom tool.

B: 4 pcs double row linear bearing ways and ballscrew are used so that our consoles do not cause any gap due to the collapses.

E: Strengthened steel construction and vibration-proof and durable side console.

The most crucial factor for precision bending in press brakes is the Backgauge system.

Akomac design features a unique, powerful and precise back gauge system that works on linear guideways at side counters and large-sized ball screws. The special design has robust construction due to its strong mechanical structure and can withstand large loads.

The back gauge finger blocks move on top of the double-rail and aluminum-plated top profile. These back gauge finger blocks are very sensitive and can be adjusted from any point.

Backgauge Finger

X-R BACKGAUGE

H: Belt tensioning mechanisms used to prevent the trigger belts, which engage the X axis motor, from making a gap.

C: The R Axis console is manufactured with a ball screw which is movable with a 200 mm stroke, with impact-resistant and anti-backlash system.

D: AC motor used in the back gauge

The most crucial factor for precision bending in press brakes is the Backgauge system.

Akomac design features a unique, powerful and precise back gauge system that works on linear guideways at side counters and large-sized ball screws. The special design has robust construction due to its strong mechanical structure and can withstand large loads.

The back gauge finger blocks move on top of the double-rail and aluminum-plated top profile. These back gauge finger blocks are very sensitive and can be adjusted from any point.

Backgauge Finger

X BACKGAUGE

H: Belt tensioning mechanisms used to prevent the trigger belts, which engage the X axis motor, from making a gap.

D: High resolution MITSUBISHI servo motor in the precision positioning axis.

F: Resistant to wear and deformation, precisely adjustable, and heat treated backgauge finger blocks.

F: Mechanical braking system to prevent movement of fingers due to shocks and vibrations during operation.

C: The X Axis console is manufactured with impact-resistant system.

G: Thanks to the tapered bearing made of tapered roller at the ends of the ballscrews, the cavities which could be formed in the ballscrew position are removed.

A: Due to the elastic deformations that can occur during manufacturing and the plastic deformations that can occur due to the collapses over time, the parallelism disturbances that can occur, due to the screws in these shafts can be adjusted very precisely.

A: Movable top profile designed to absorb deformations that may occur in the trapezoid and precisely calibrate the distance to the bottom tool.

B: 4 pcs square type double row linear guideways and ballscrew are used so that our consoles do not cause any gap due to the collapses.

E: Strengthened steel construction and vibration-proof and durable side console.

CONTROL UNITS

CYBELEC TOUCH8 2D

- 8" Colored Touch Screen.
- 2D graphic profile creation with manual sequencing (option).
- Bending sequences and programs can be memorized.
- Easy single bends with the EasyBend page.
- USB Flash Memory port for data transfer/backup
- User Language Options
- Easy Tool Drawing

CYBELEC TOUCH12 2D

- 12" Colored Touch Screen.
- 2D graphic profile creation with manual sequencing (option).
- Bending sequences and programs can be memorized.
- Easy single bends thanks to the "EasyBend" page.
- USB Flash Memory port for data transfer/backup
- User Language Options
- Easy Tool Drawing

CYBELEC TOUCH15 2D

- 15" modern streamlined glass surface touch screen that can be used with gloves.
- User friendly HMI thanks to intuitive programming and easy to set up with dedicated wizards (autotuning).
- 2D graphical profile drawing (Touch Profile) and precise 2D program creation.
- Automatic bending sequence calculation.
- Easy single bends thanks to the EasyBend page.
- Wide storage capacity.
- Internal backup and restore functions.
- Wireless communication for extended diagnostics and updates (with laptop).

CYBELEC VISITOUCH19 2D

- 19" modern streamlined glass surface touch screen that can be used with gloves.
- User friendly HMI, similar to the CybTouch's one, thanks to an intuitive programming and dedicated set-up wizards (autotuning).
- 2D graphical profile drawing (Touch Profile) and precise 2D program creation.
- Automatic bending sequence calculation.
- Running under Windows 7 for multitasking and networking.
- Internal backup and restore functions.
- Outstanding diagnostic tools

CYBELEC VISITOUCH 19MX 3D

- 19" modern streamlined glass surface touch screen that can be used with gloves.
- User friendly HMI, similar to the CybTouch's one, thanks to an intuitive programming and dedicated set-up wizards (autotuning).
- Full 3D visualisation and simulation.
- Parts management with DXF flat pattern and 3D format files import.
- Automatic solutions of complex parts: automatic bend sequencing, gauging, tooling and auto segmentation.
- Running under Windows 7 for multitasking and networking.
- Internal backup and restore functions.
- Outstanding diagnostic tools.

DELEM DA58T 2D

- 15" Colored Touch Screen.
- 2D graphic profile creation with automatic sequencing.
- Automatic bend sequence calculation and collision detection
- Full 3D machine set-up with multiple tool stations
- USB Flash Memory port for data transfer/backup
- User Language Options

DELEM DA66T 2D

- 17" Colored Touch Screen.
- 2D graphic profile creation with automatic sequencing.
- On-screen finger profile drawing.
- Touch Screen Scaling
- Full 3D Simulation
- 1 GB Hard Disk Drive (HDD) - 256 MB part memory
- Windows Operating System
- User Language Options
- Automatic bend sequence calculation and collision detection & Full 3D machine set-up with multiple tool stations
- USB Flash Memory port for data transfer/backup
- RJ45 Ethernet for network
- Delivered with offline software (This software allows you to create, calculate, and control the feasibility of parts on a desktop/laptop computer at the office)

DELEM DA69T 3D

- 17" Colored Touch Screen.
- 2D & 3D graphic profile creation with automatic sequencing.
- On-screen finger profile drawing.
- Touch Screen Scaling
- Full 3D Simulation
- 1 GB Hard Disk Drive (HDD) - 256 MB part memory
- Windows Operating System
- User Language Options
- Automatic bend sequence calculation and collision detection & Full 3D machine set-up with multiple tool stations
- USB Flash Memory port for data transfer/backup
- RJ45 Ethernet for network
- Delivered with offline software (This software allows you to create, calculate, and control the feasibility of parts on a desktop/laptop computer at the office)

ESA S630 2D

- 10" Touchscreen Color Display.
- Creating 2D Graphics profile with automatic convolution sequence.
- 3D Simulation.
- Part Scratching with touchscreen.
- Bending sequences and programs can be stored in memory.
- Easy single bending page.
- USB memory port for data transfer / backup.
- Windows operating system
- Windows networking with Ethernet connectivity
- User Language option

ESA S640 2D

- 15" Touchscreen Color Display.
- Creating 2D Graphics profile with automatic convolution sequence.
- 3D Simulation.
- Part Scratching with touchscreen.
- Bending sequences and programs can be stored in memory.
- Easy single bending page.
- USB memory port for data transfer / backup.
- Windows operating system
- Windows networking with Ethernet connectivity
- User Language option

ESA S660W 3D

- 19" Touchscreen Color Display.
- Creating 3D Graphics profile with automatic convolution sequence.
- 3D Simulation.
- Part Scratching with touchscreen.
- Bending sequences and programs can be stored in memory.
- Easy single bending page.
- USB memory port for data transfer / backup.
- Windows 7 operating system
- 20 GB HDD
- Windows networking with Ethernet connectivity
- User Language option

Bending without Crowning

$$\alpha 1 = \alpha 3 < \alpha 2$$

Bending with Crowning

$$\alpha 1 = \alpha 2 = \alpha 3$$

Advantages of crowning to achieve a constant angle;

A press brake's bending precision is affected by the deviations of the upper and lower table as well as other factors.

Press brakes deviate from the opposite direction.

Penetration of the force obtained into the tool is not constant, and the angle is not the same over the length of the machine.

The independent right and left axes (Y1 and Y2) controlled both by proportional valves and linear position control systems.

The crowning system distributes the bending force equally to each point of the bending part to ensure correct bending results.

- : Nominal Working Capacity (Ton)
- L : Maximum bending length
Table L = 1000mm
- V : Tool Width (mm)
- D : Minimum sheet bending distance (mm)
- R : Bending Radius
- S : Material Thickness (mm)
- V : Material Tensile Strength (V=42 kg/mm²)
- P : Bending Force (Ton)

$$P = \frac{1.42 \times V \times S^2 \times L}{1000 \times V} \text{ (Ton)}$$

Sheet Follower

Mitsubishi Servo Motors

Mitsubishi Drivers

The movement of the back-gauge is operated by the CNC control unit in hydraulic press brakes.

The high performance servo motors produced by Mitsubishi move the bearing axes.

Precision parts are produced by these motors. The electrical circuit components used are Siemens, Telemecanique and Schneider brand products.

AKAS II M-FMSC

Magnescales

Quick & Easy Adjustable Support Arms.

It is mounted in front of the machine in such a way as to move on a linear slide system and on a ball bearing.

It is easy to use by taking the desired position even when lightly pushed, and it is also possible to adjust it vertically.

Oil Heaters

Motorized Central Lubrication

The bedding of the top table kept longer to avoid stretch during bending and easy to slip.

To keep the bedding outside of the columns provides an advantage in box bends.

The top plate connections are mounted with double springs as well as spherical connection to the cylinders with double safety.

The parallelism with the top plate can be adjusted more precisely and the proportional valves can work synchronously with each other.

The press brake bodies machined in 5 Axis CNC machines can make more precise bendings and to reduce the friction coefficients to the minimum level.
